

A PARTNERSHIP BUILT ON SUCCESS

“In 2012, we replaced a 17-year-old Braun tunnel with a remanufactured Braun tunnel. The project was so successful, the following year we replaced our second tunnel system in its entirety with a Braun system.”

Our second remanufactured tunnel is partnered with a remanufactured press, new shuttle and Braun’s Side-By-Side dryers. We were able to add a sixth dryer in the same footprint as the five dryers we replaced. With the efficiency of our new dryers, our total cycle time is almost half of our other dryer line, giving us the capability to run more goods through our tunnel every hour.
