Banba Niang, Director of Environmental Services, St. Joseph's Healthcare Laundry, Savannah, GA.

The laundry processes 5 million pounds per year. They have a 6,000 square foot area that is integrated with the hospital. They operate with Braun conventional Medicare Washer-Extractors. The laundry operates 6 days per week in a one shift operation. The upgrade required close cooperation with the laundry operations and engineering teams to complete the integration of the new machines on time and on budget.

The equipment consisted of Braun's New 400 and 600 lb. TSL Medicare Washer-Extractors.

"We are very pleased with our new Braun equipment. The new machines replaced older equipment from another manufacturer. The new washers save time loading and unloading for each cycle. The operators like the automated shell door which opens at the touch of the button. The installation was smooth and on time. Braun provided complete training for our team, both our operations and engineering professionals. We appreciate Braun's level of commitment to the customer and their attention to detail."
