

Uniform Masters Memphis, TN

Industrial Laundry Processor

Uniform Masters recently installed a new Braun 123H Dryer to replace their 40 year-old Braun Dryer.

The new Braun dryer fit into the exact and very defined footprint that the old dryer had. This was very important as our plant layout offers little wiggle room. This installation provides us with a considerable increase in equipment reliability and throughput.

The Braun team provided us a turn-key installation by removing the older dryer and completely installing the new dryer with all the related utilities. We were operational on Monday after a weekend install.”
